

Douglas Kelley

Biosphere & Climate Dynamics Modelling

Summary

douglas.i.kelley@gmail.com
+44 (0) 7936 726 819
douglask3.github.io

Academic qualification

- PhD Ecology**
2014
Macquarie University, Department of Biological Sciences, Ryde, NSW, Australia
Thesis: Modelling Australian fire regimes
- MSc Earth System Science**
2008
University of Bristol, Department of Earth Sciences, UK
Dissertation: Statistical modelling of global fire regimes.
- BSc (Hons.) Physics**
2007
University of Warwick, Department of Physics, UK
Dissertation: Modelling atmospheric effects on starlight

Employment History

- Postdoctoral Research Assistant**
Apr 2015-present
Department of Geography & Environmental Science, University of Reading, UK
- Postdoctoral Research Assistant**
Jun 2014-Mar 2015
Department of Biological Sciences, Macquarie University, Ryde, NSW, Australia
- Research Assistant**
Sep 2008-Sep 2010
Department of Geographical Sciences, University of Bristol, UK

Publication Statistics

Total Citations: 192 H index: 6 i10 index: 3

Award

- Macquarie University Research Excellence Scholarship**
2010-2014
Macquarie University, Ryde, NSW, Australia
- Post Graduate Research Fund (PGRF)**
2013
Macquarie University, Ryde, NSW, Australia
- Biology postgrad conference best presentation**
2011
Biological Sciences, Macquarie University, Ryde, NSW, Australia

Current Research Interests

- Vegetation-climate dynamics and ecosystem modelling, including:
- Fire dynamics and fire--climate--vegetation interactions
 - Wildfire impacts (on e.g vegetation, carbon-cycle, hydrology)
 - Vegetation disturbance resistance and recovery
 - Vegetation model benchmarking and diagnosis
 - Plant resource allocation strategies

Academic qualification

- PhD Ecology

Modelling Australian fire regimes

2010-2014

Macquarie University, Department of Biological Sciences, Ryde, NSW, Australia

Benchmarking and developing the LPX Dynamic Global Vegetation Model (DGVM) to improve the simulation of fire and fire-vegetation interacting. Using this new version of LPX to simulate fire, vegetation and carbon dynamics in Australia over the 21st century. Thesis can be downloaded from
- MSc Earth System Science

Main dissertation: Wildfires as part of the global carbon cycle - Quantitative analysis using data assimilation

2007-2008

University of Bristol, Department of Earth Sciences, UK

Other subjects covered: Earth system modelling; Natural hazards; Remote sensing & GIS; Isotopes and other Earth System tracers; Climate change science and policy
- BSc (Hons.) Physics

Main dissertation: Modelling atmospheric effects on starlight

2002-2007

University of Warwick, Department of Physics, UK

Employment History

- Postdoctoral Research Assistant

Apr 2015-present

Department of Geography & Environmental Science, University of Reading, UK

Simulating present and future fire regimes using coupled dynamic global vegetation model (DGVM) and process based fire model.
- Postdoctoral Research Assistant

Oct 2014-Apr 2015

Cafe M Research Group, Department of Biological Sciences, Macquarie University, Ryde, NSW, Australia

Testing conceptual phenology and plant carbon allocation models under changing climate and elevated CO2 fertilization.
- Research Assistant

Jun 2014-Sep 2014

Biosphere & Climate Dynamics, Department of Biological Sciences, Macquarie University, Ryde, NSW, Australia

Modelling changes on past and future vegetation-fire dynamics and its feedback on terrestrial and atmospheric carbon.

Extended CV

Employment History Continued

Research Assistant

Sep 2008-Sep 2010

Department of Geographical Sciences, University of Bristol, UK

DGVM-fire model development. Applying developed model to: test to effectiveness of different fire management techniques in current and future climates; simulate paleo vegetation and carbon stocks.

Earth System Science Summer School coordinator

Apr 2008-Sep 2008

Department of Earth Sciences, University of Bristol, UK

Publicity; lecture and seminar timetabling; finding and organising guest lectures; general admin.

Widening Participation

Sep 2007-Sep 2008

Widening Participation Office, University of Bristol, UK

Working with students in primary and secondary education to encourage university attendance from low socio-economic backgrounds: helping organize & run University open days and campus tours; in-school presentations and career evenings.

Extended CV

Award

Macquarie University Research Excellence Scholarship (iMQRES)

2010-2014

Macquarie University, Ryde, NSW, Australia

Postgraduate award for completion of PhD

Postgraduate Graduate Research Fund (PGRF)

2013

Macquarie University, Ryde, NSW, Australia

Competitive award to enhance postgraduate research experience. Funded attendance at the 2013 AGU fall conference in order to present DGVM development and future projection of fire regimes and terrestrial carbon stocks under climate change

Biology postgraduate conference best presentation

2011

Biological Sciences, Macquarie University, Ryde, NSW, Australia

Best presentation out of the departments 78 postgraduate students at the annual post-graduate conference. Awarded for presentation on a vegetation model benchmarking system

Current Research Interests

My research focuses on improving our understanding of the interactions between vegetation and climate, and exploring how these interactions impact terrestrial ecosystem properties such as carbon and hydrological cycles. Much of this involves utilising experimental and satellite data for more observation-driven vegetation model development and benchmarking. Most of this has been exploring climate and vegetative controls and fire, and the impact fire has on ecosystem, atmospheric emission and the carbon cycle, and vegetation-controlled hydrology. I am also involved in projects that explore plant resource allocation, phenology and drought recovery strategies.

My current research projects include:

Development of the LPX coupled Dynamic Vegetation-fire model

<http://douglask3.github.io/lpx-dynamic-global-vegetation-model.html>

Much of my thesis focussed on the assessment and development of the LPX-DGVM-fire model to better represent fire and fire-adapted vegetation in tropical savanna ecosystems. Continued development strands include :

- Improving fire-model performance for forest ecosystems
- Parameterization of the carbon cycle and trace gas emissions
- Continued development of disturbance resilience and resistance traits - e.g. resprouting after fire and drought.

Vegetation model benchmarking and inter-comparison

<http://douglask3.github.io/vegetation-model-inter-comparison-benchmarking.html>

I am the main developer and maintainer of the most widely used vegetation-model benchmarking system, which qualitatively assess model performance for a variety of vegetation and land surface processes. Current work includes:

- Incorporation for fire regime observations
- Inter-model comparisons for the fireMIP project
- R-package development

Vegetation disturbance resistance and recovery databases

<http://douglask3.github.io/traits-for-resistance-and-recovery-to-disturbance.html>

I have been involved in the compilation of two databases compiling variations in resistance and recovery traits across plant species and geographic locations:

- Bark Thickness as protection against fire.
- Resprouting as a recovery to extreme disturbance from fire and drought.

Plant resource allocation strategies

<http://douglask3.github.io/traits-for-resistance-and-recovery-to-disturbance.html>

More recently, I have become involved in research projects exploring wider vegetation dynamics and responses to environmental change including:

- The testing of conceptual carbon allocation strategies in a vegetation model framework, and the response of the strategies to changing climate and increasing CO₂ fertilization.
- Development of a simple dry-season phenology model for tropical grass and woodland ecosystems.
- For more detail on all these projects, see douglask3.github.io/pages/research-interests

Extended CV

Workshops and Consultancy Visits

Using plant functional traits to predict ecosystem vulnerability to changing fire regimes

Australian Centre for Ecological Analysis and Synthesis (ACEAS)
Oct 2013

University of Queensland, Brisbane, QL, Australia
Data Synthesis workshop for fire resilience and response traits

Fire response traits database

May 2013

Macquarie University, Ryde, Australia

Workshop on construction of database on distribution of different resprouting traits in climate space, as part of the Australian Centre for Ecological Analysis and Synthesis (ACEAS) Working group " Using plant functional traits to predict ecosystem vulnerability to changing fire regimes "

Technical Assistance for Climate Change

Oct 2009

Royal Society for the Conservation of Nature, Jordan

Report on Impacts of Future Climate Change on Vegetation, Fire, and Runoff in Jordan

Training Courses

Software Carpentry

Feb 2013

Programming philosophy, code structure and version control

Genses2Geoscience: Writing for journals

Aug 2012

Macquarie University, Ryde, Australia

Drafting and writing journal articles and research proposals

Genses2Geoscience: Database Construction using sql

Sep 2011

Macquarie University, Ryde, Australia

Genses2Geoscience: Teaching in small groups

Aug 2011

Macquarie University, Ryde, Australia

Effective questioning, encouraging equal participation, and managing student behaviour.

Planning and writing journal articles

Nov 2009

Macquarie University, Ryde, Australia

Planning articles to fit journals.

Skills

Vegetation modelling

I have been lead developer on LPX - a high-complexity coupled Dynamic Vegetation-Fire Model - since 2009LPX has both Fortran and C++ components for fast (relative to it's complexity) computational times. I have recently also added a shell and R interface to facilitate parrallization and to allow results to be easily plotted and analysed.

See dougask3.github.io/LPX for more information.

Statistical Programming

Most of my research involves statistical anaylsis of large datasets and model outputs. Collaboration on many of my projects means I am fluent in most widely used statistical programming languages. Most of my work is in either R, python and matlab, but I have also performed graphical and statitital analysis using Fotran and C amongst others.

See dougask3.github.io/my_best_plots for examples of R and matlab plots from my PhD.

See dougask3.github.io/lpxbenchmarking for an example of statistical benchmarking of extensive model outputs again global raster and site-based datasets.

Skills Continued

Web Design

In my spare time, I have developed dynamic websites using open source content management system. My personal site is on a static host, but is maintained using a python based dynamic-site emulator. Developing and maintaining these sites have allowed me to become familiar with many content management systems (i.e. wordpress, concrete5 etc) and fluent in HTML/CSS, PHP and Markdown. I have linked Markdown with R and python when sharing and presenting results from model development and analysis.

See eppingdac.com.au, an example of a website I have developed using Concrete5 Content Management System

See dougask3.github.io, an example of a website produced using a simple dynamic-site emulator.

Publishing

As well as publishing papers, I have also written manuals, reports and newsletters using a variety of languages and software products, including (aside from standard office/open office):

- Latex - this includes my thesis (available)
- Scribus - for example, my running clubs newsletter eppingdac.com.au/news-and-views/newsletter
- Photoshop/Illustrator and GIMP (the open source equivalent). See flickr.com/doug_from_the_uk for examples of graphical art and photo "touch ups", manipulation.

Software Tools

I have developed and maintained several software packages related to my research projects and shared with collaborators. Some of the most used are:

Extra-Circular

Committee Member responsible for web-design communications, and social runners

Feb 2011-May 2015

Epping and District Athletics Clubs North Epping, Hornsby, NSW, Australia

Website development www.eppingdac.com.au ; designing, producing and distributing newsletter and e-publicity for local community running and athletics club

Student Union involvement

2002-2009

University of Warwick and Bristol University

Sabbatical year sitting on board of directors of Warwick Students Union responsible for the Student Advice and Welfare department; 3 years as charity trustee and 6 years on student council responsible for Science Faculty representation; committee posts on various student run sports clubs and societies including People and Planet, Student TV station , Student Support Groups, and running clubs

Digital photography: creating and sharing better images

2010

Open University, UK

Open University undergrad course in digital photography and image manipulation

See www.flickr.com/photos/doug_from_the_uk
